

Why Smart Home?

At Bronte Square we realize that home technology can be used to dramatically improve the home owners lifestyle.

We will work with you to determine your needs and plan for future advances in technology.

Simply put, the basic system - or Infrastructure package that we can provide will connect devices and computers around the home - effectively piping services such as internet connections to each of the connected devices.

The advances of technology in the future will mean that many more services such as VDSL will be available to us and more devices will be able to take advantage of an internet connection.

From streaming music and video content around your new home to controlling your environment remotely - we can offer several options that will enhance your lifestyle.

Tomorrows technology in built for today.

Technology for Life

Home Networking

Bronte Square apartments and houses can be fitted complete with our in built home network infrastructure package.

The network manager and data points around the home allow you to connect to other computers in the apartment to share files, printers and internet connection with in built sockets conveniently placed around the house.

The system also incorporates your telephone lines and can be expanded to accommodate new lines into the house such as fax lines etc..

With advances in technology such as Voice Over IP and VDSL (Video over Internet), the system can pipe these new services all around the house and is designed for the demands of future advances in technology .

Multi Room Audio

A multi room system is what entertainment should be all about.

The addition of wiring in Bronte Square for multi room audio means you can listen and even watch whatever you want to - in any room of the house.

The solution is a non-intrusive, discreet system - literally built-in to the fabric of your home in much the same way as central heating, lighting or plumbing. All that you would typically see are very discreet flush mounted ceiling speakers and elegant in-wall keypads rather than a mishmash of boxes and wires intruding into your living space.

We offer several packages for Multi Room Audio and Multi Room Video is also available for Off-Plan purchases.

Home Automation

Bronte Square has also been designed to accommodate the very latest in lifestyle technology - Honeywell HomeTronic.

This smart and easy to use system can control lighting, heating and even appliances. Linking everything together and allowing you to perform multiple tasks with the touch of a single button.

The system works without wires and can be operated by remote control from anywhere in the apartment or by the HomeTronic Manager.

This means that you could turn the lights off downstairs, draw the curtain upstairs and put the kettle on all at the same time!

Its enhanced security features offers Presence Simulation that will record your actions over a 7 day period and play them back when you are away from home.

It can also be linked to the alarm system in case of an emergency or break in and can be controlled via mobile phone.

Service and Support

Our IT department installs all the systems and configures them to work together.

We can also help in setting up your computers for you and install additional features such as wireless networking to work with the existing system, allowing you to work, play and learn anywhere in the home.

We can also provide computer training for those people wanting to take full advantage of the systems we offer.

More Information

More information can be found on each of these systems and how they work and the benefits they can have for you. Please visit the smart home section on the website at : www.brontesquare.co.uk.

Fast, Secure Network

As the apartments are has been hard wired with the latest Cat5E standards the data and services travelling over the cables do so at lightning speed - 10 times plus faster than a wireless setup. It is also 100% secure.
